

Research Methods for Understanding Student Success in the California Community Colleges

Presentation to Bay Area RP Regional Research Meeting

Nancy Shulock Colleen Moore

California State University, Sacramento

1. Evolution of a Denominator

- Research question: What is the completion rate?
- Methods challenge: who intends to complete what?
- IHELP developed 3-part criteria with help from RPers
 - Age 17-19 at initial enrollment
 - Self-report goal of completion or transfer, or
 - Behavioral (12 units and attempt degree-applicable English or math)

Research basis

- Younger CC students more likely to report and achieve completion goal (>2/3 of completions were < age 20)
- 2/3 of completions had indicated goal of completion
- CCC accountability metric, based on course-taking behaviors
- How good was this measure?
 - 60% of entering cohort

Denominator (cont.)

- Revised measure enroll in >6 units in first year
 - Borrowed from leading national CC researcher
 - 63% of cohort
- ARCC continued with smaller denominator
- Vastly different rates reported in media
- New scorecard metric
 - At least 6 units earned and attempted any math or English in the first 3 years
 - About 50% of cohort

2. Moving to Progression Measures

- Research question: where and why does progress stall?
- Methods challenges:
 - Distinguish progression points from predictors
 - Data lacking on key milestone (complete remediation)
- Milestones: drew on work of CCRC "momentum points"
- Success indicators: literature review on student success
 - Some factors not actionable (income, parents education)
 - More helpful: enrollment behaviors and academic patterns

Milestones and Success Indicators Framework

- Milestones: measurable, intermediate educational achievements students reach along the path to degree completion
- Success Indicators: measurable academic patterns that students follow that predict the likelihood they will reach milestones and ultimately earn a degree
- Regression models used to identify patterns related to completion

Milestones:

- 2nd term retention
- 2nd year retention
- 12+ college credits
- 30+ college credits
- Transfer curriculum
- Certificate
- Associate degree
- Transfer with curriculum
- Transfer without curriculum

Success Indicators:

- Attend full time in first term
- Take college success course
- Enroll continuously
- Pass college Math w/in 2 yrs
- Pass college Eng w/in 2 yrs
- Complete 20+ credits in first yr
- Earn summer credits
- % course withdrawals
- % course late registration

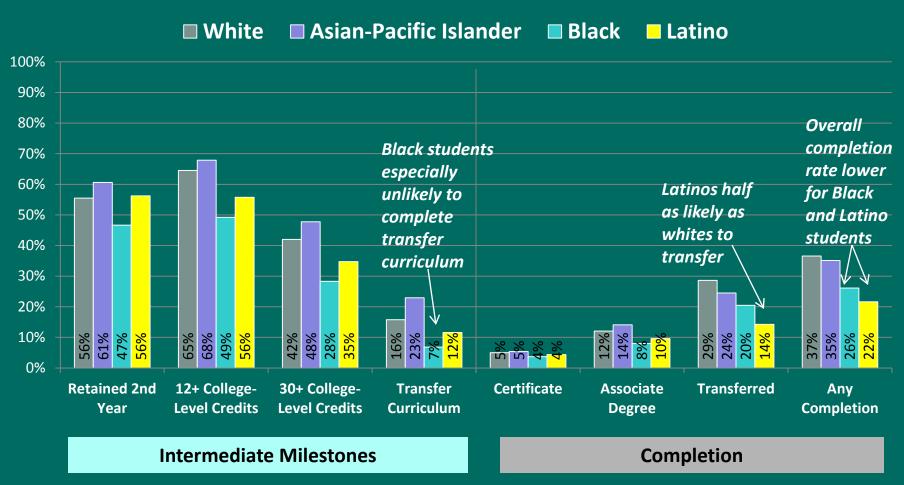

Student Enrollment Patterns are Important Factors in Likelihood of Completion

Percent Who Completed (Certif/Assoc/Transfer) by Success Indicator Behavior - Yes/No

Success Indicator:	<u>Yes</u>	<u>No</u>
CL Math within two years	61%	22%
CL English within two years	51%	21%
Summer credits	45%	15%
Full-time in first term	39%	21%
On-time course registration	32%	24%
Continuous enrollment	36%	29%

Source: IHELP, Steps to Success: Analyzing Milestone Achievement to Improve Community College Student Outcomes, 2009

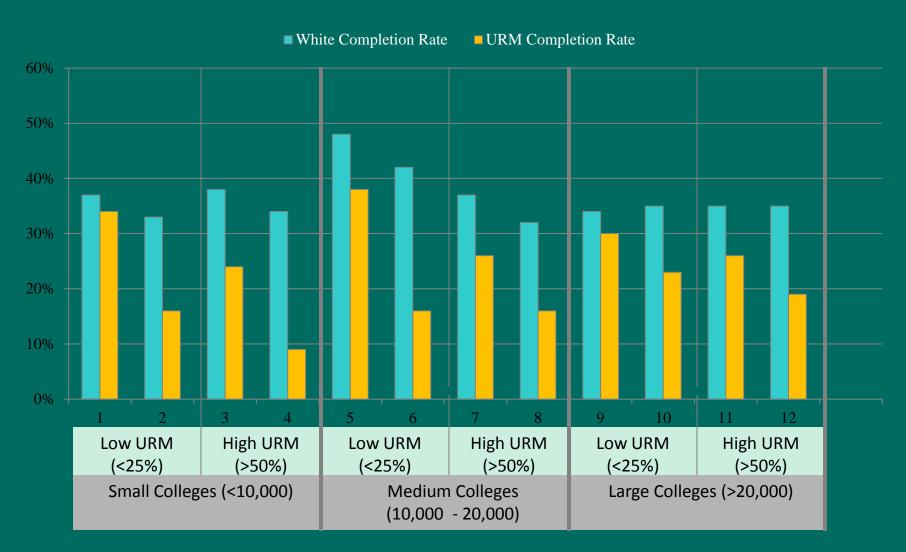

Breakdowns by Race/Ethnicity Reveal Disparities

Source: IHELP, Divided We Fail: Improving Completion and Closing Racial Gaps in California's Community Colleges, 2010. Note: Students can be double-counted in the certificate, associate degree, and transfer measures

Demographics are Not Destiny:

Colleges of Similar Size and Demographic Profile Produce Very Different Outcomes

Further Analysis on Problems Can Point to Solutions

All Degree Seekers (N=247,493)

Completed CL Math Course within 2 Yrs 41,808 (17%)

Did Not Complete CL Math Course within 2 Yrs, 205,685 (83%)

Policies and practices related to assessment/ placement, advising and registration processes, course scheduling

No Math Courses Taken within 2 Yrs 105,148 (51%)

Enrolled in at Least One Math Course 100,537 (49%)

Enrolled Only in Remedial Math 64,412 (64%)

Enrolled in CL Math 36,125 (36%)

Policies and practices related to innovative methods of remedial course design and delivery

Policies and practices related to course dropping and repeats, academic assistance

On average, these students:

- Enrolled in 2 CL math courses in 2 yrs
- Dropped 65%
- Failed 35%

Source: IHELP, Steps to Success: Analyzing Milestone Achievement to Improve Community College Student Outcomes, 2009

3. Entering a Program of Study

- Research question: how important is this milestone (and a more programmatic emphasis)?
- Methods challenge: students do not declare majors
- Adapted method from CCRC based on course taking
- Taxonomy of 21 programs (TOP codes)
 - 3 liberal arts and sciences (Math/Natural Sciences,
 Social/Behavioral Sciences, English/Arts/Humanities)
 - 18 CTE

Determining Students' Program of Study

Definitions

- Attempting /Entering a program = enrolling in/completing
 9 college-level credits in single program or across the 3
 liberal arts/sciences
- Primary program = the program in which a student completed the largest number of credits (some students "enter" more than one program)

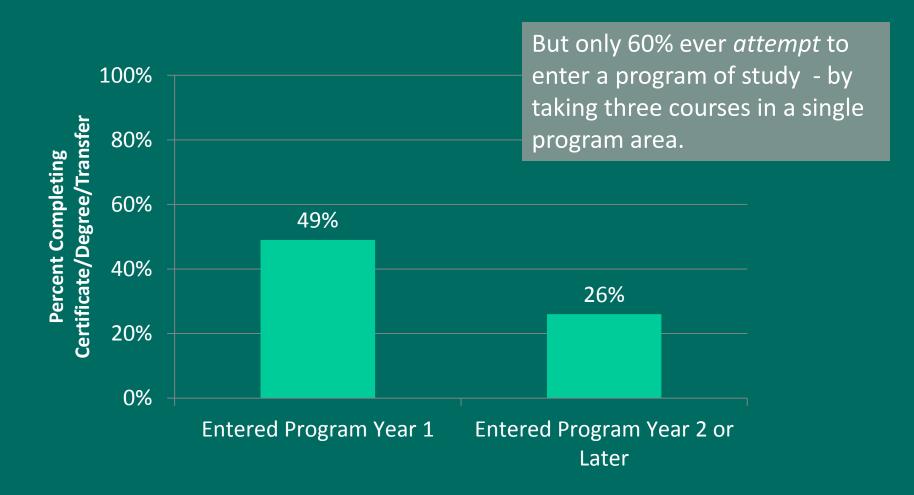

Useful for –

- Examining variation across groups of students in program attempt/entry, timing, types of programs entered
- Examining student progress across programs

Limitations –

- Overstates student interest in liberal arts/sciences
- Only useful for studying patterns, not assisting students

Completion Rate Nearly Twice as High among CCC Students Who Enter a Program of Study in Year 1

4. Exploratory Study of CTE Pathways

- Research question: How well are students progressing through career pathways?
- Methods challenge:
 - Students don't declare majors
 - Most transfers do not complete CC degree/certificate
- Selected 4 high-wage, high-need fields
- Studied CC patterns of "completers" (at CCC or CSU)
 - Few basic skills courses (lack of math/English requirements for certificates? low completion among those needing remediation?)
 - Significant excess credits (complexity of pathway? inadequate advising?)
 - Pathway issues not much sequential progression, few technical degrees

CTE Pathways (cont.)

- Studied entering cohort of students who appeared to be pursuing those pathways
 - Developed criteria for inclusion in each pathway based on what was learned from "completers"; iterative process – tried out different criteria and compared demographics of resulting group to demographics of completers
 - E.g., Engineering
 - enrolled in 2+ degree-applicable math courses and 2+ physical science courses OR
 - Enrolled in 2+ degree-applicable math courses and at least one engineering course
 - Used course enrollment rather than completion (like Perkins) to be more inclusive of students who may have intended to pursue but did not accrue enough credits

CTE Pathways (cont.)

Findings

- Most associate degree earners did not earn certificate
- Most certificates/degrees were outside field of study
- Few transfers earned associate, and those who did were mostly in interdisciplinary studies (not vocational)

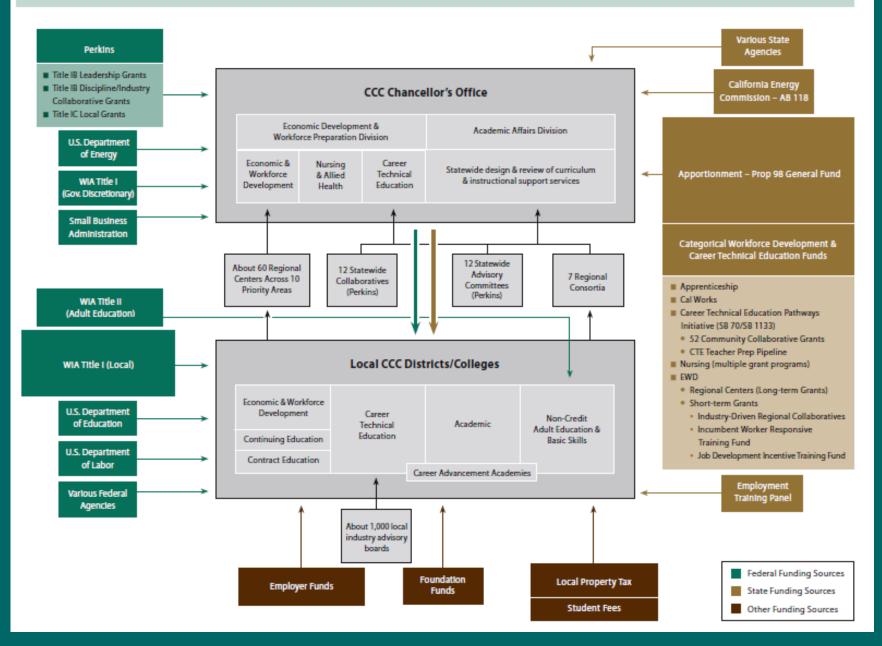

Tentative conclusions

- Good progress not translating into credentials
 - Low incidence of certificates/degrees
 - Significant credit accumulation
- Weak pathways
 - Basic skills needs and options unclear
 - Little evidence of sequential pathways
 - Substantial program variation

5. Full Evaluation of CTE Mission

- Research question: how well are state/system policies aligned with CTE mission?
 - Hypothesis: "transfer bias" leads to misalignment
- Methods challenge:
 - Limiting the scope to CCC core
 - Huge and complex how to make sense of it?
- Framed in terms of seven criteria for effective CTE
- Mixed methods mostly qualitative
 - I. Organization and Funding
 - II. Inventory of programs
 - III. Policies in other states
 - IV. Policy alignment

California Community Colleges Career Technical Education/Workforce Preparation Structure and Funding (Fall 2011)

Inventory: Methods

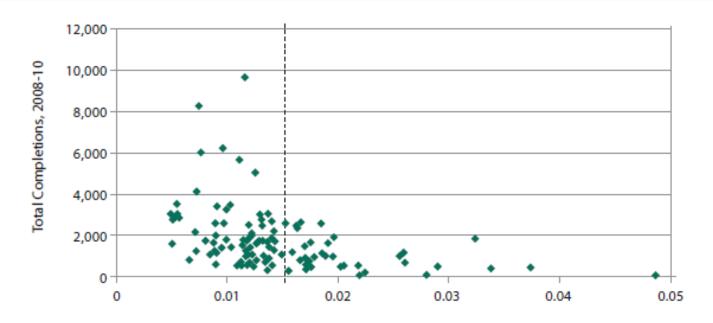

- CCC's inventory of approved programs (associate degrees, certificates of 18+ credits)
- College catalogs for college-approved certificates
- Definitions:
 - Field: 4-digit TOP code level
 - Program: A certificate or degree program at a college
- Count, organize, and analyze

Inventory – Just the Facts

- About 8,000 certificate programs and 4,500 associate degree programs in 142 fields
- Average per college: 113 programs in 25 fields
- Range of programs at a single college: 28 275
- Average per region: 959 programs in 91 fields
- Enrollments and completions highly concentrated in a few fields
 - 7% of fields account for half of enrollments
 - 6% of fields account for over half of completions

Are Colleges Spread too Thin?

Figure 16
Relationship between Program Offerings Per Student and Completions at Individual Colleges

Offerings Per Student

Methods for Policy Analysis

- Comprehensive set of policies for starters
- Help from the field which are important factors/why?
- Systematic analysis of policies
 - Education Code and Title 5

Framework for Policy Reform

Barriers to Satisfying 7 Criteria for Effective CTE Mission, by Theme:

- A. The CTE mission is marginalized from the academic core of the institution
- **B.** There is an insufficient focus on programs and their outcomes
- C. Individual colleges are expected to do too much in isolation, creating excessive workload and variability in policy and practice that don't benefit students

Policy Change:

Education Code

Title 5

Vision for Student Success (per the 7 criteria for effective CTE mission):

- 1. K-14 articulation
- 2. CTE advising
- 3. Program offerings
- 4. Pathways
- **5.** Learning outcomes
- 6. Labor market value
- 7. Resource support

6. Transfer

- Research question: how can California's transfer process be more effective?
- Methods: policy analysis
 - Identify problems in CA with transfer
 - Identify causes decentralized; not student-centered
 - Key "aha"- variability in LD prep for Psychology
 - Study other states
 - Identify alternatives and criteria
 - Analyze and apply to California

Classic Policy Analysis

Alternatives

- Associate degrees for transfer (statewide patterns)
- Statewide GE curriculum, major prep pathways, no transfer associate degree
- 3. Statewide GE for early transfer with LD status

Criteria

- 1. Effective
- 2. Efficient
- 3. Transparent
- 4. Robust
- 5. Strategic (target state needs)
- 6. Feasible
